

Amendments to the Claims:

The following complete listing of the claims will replace all prior versions, and listings, of claims in the application. Kindly amend Claims 1, 7, 14-16, 21-25 and add new Claims 26-28, wherein no new matter has been introduced.

Listing of Claims:

1. (currently amended) A method of displaying and rating content, comprising:
receiving content, the content receiving step comprising streaming the content in real-time for viewing while being captured;
creating profile information associated with the content;
5 showing the content on a display device;
receiving a vote on the content, wherein the vote reflects the quality of the content; and
updating the profile information associated with the content to reflect the vote.
2. (original) The method according to Claim 1 further comprising storing the profile information associated with the content within a storage device.
3. (original) The method according to Claim 1 further comprising capturing the content with a content capturing device.
4. (original) The method according to Claim 3 wherein the content capturing device is a video camera.
5. (original) The method according to Claim 3 wherein the content capturing device is a digital camera.
6. (original) The method according to Claim 3 wherein the content capturing device is an audio recorder.

7. (currently amended) The method according to Claim 1, further comprising the step of identifying the content from multiple pieces of content.

8. (original) The method according to Claim 1 wherein receiving the content occurs in real time relative to capturing the content.

9. (original) The method according to Claim 1 wherein the content is video footage.

10. (original) The method according to Claim 1 wherein the content is a digital image.

11. (original) The method according to Claim 1 wherein the content is audio data.

12. (currently amended) The method according to Claim 1 wherein a rating value is determined for[[.]]the content based on the vote.

13. (original) The method according to Claim 12 further comprising comparing the rating value with a predetermined value rating threshold.

14. (currently amended) The method according to Claim 13 further comprising selectively displaying the content based on [[the]] comparing the rating value.

15. (currently amended) A system for displaying and rating content, comprising:
means for receiving content, the content streaming in real-time for viewing while being captured;

means for creating profile information associated with the content;

5 means for showing the content on a display device;

means for receiving a vote on the content, wherein the vote reflects the quality of the content; and

means for updating the profile information associated with the content to reflect the vote.

16. (currently amended) A method of displaying and rating content, comprising the steps of:
identifying content, the content identifying step comprising streaming the content in real-
time for viewing while being captured;

creating profile information associated with content;

5 showing the content to a plurality of viewers;

receiving a vote on the content from each of the plurality of viewers, wherein the vote
reflects the quality of the content;

determining a rating value for the content based on the vote; and

displaying the content to the plurality of viewers based on the rating value of the content.

17. (original) The method according to Claim 16 further comprising updating the profile
information associated with the content to reflect the rating value.

18. (original) The method according to Claim 16 further comprising checking for a number
of viewers submitting the vote.

19. (previously presented) The method according to Claim 18 further comprising comparing
the number of viewers with a predetermined minimum number of votes, wherein the content is
not displayed if the number of viewers does not meet the predetermined minimum number of
votes.

20. (original) The method according to Claim 16 further comprising storing the profile
information.

21. (currently amended) A device for displaying and rating content, comprising:

a content identification module to detect content, the content streaming in real-time for
viewing while being captured;

a storage module to store the content and a profile information associated with the
5 content;

an interface module for receiving the content and transmitting the content based on the

profile information corresponding to the content; and

a content rating module that receives a rating value from a viewer for the content and that updates the profile information associated with the content, wherein the rating value reflects the quality of the content.

22. (original) The system according to Claim 21 wherein the content includes one of a video footage, digital image, and audio data.

23. (original) The system according to Claim 21 further comprising a rendering module for formatting the content to be displayed to the viewer.

24. (original) The system according to Claim 21 further comprising a rendering module for selectively formatting the content for display to the viewer based on the rating value associated with the content.

25. (currently amended) A computer-readable medium having computer-executable instructions for performing a method comprising:

identifying content, the content identifying step comprising streaming the content in real-time for viewing while being captured;

creating profile information associated with content;
showing the content to a plurality of viewers;
receiving a vote on the content from each of the plurality of viewers, wherein the vote reflects the quality of the content;
determining a rating value for the content based on the vote; and
displaying the content to the plurality of viewers based on the rating value of the content.

26. (new) The method according to Claim 1, further comprising the steps of:
storing the profile information associated with the content within a storage device;
capturing the content with a content capturing device;
identifying the content from multiple pieces of content;

5 comparing the rating value with a predetermined value rating threshold; and
selectively displaying the content based on the comparing the rating value,
wherein the content capturing device comprises at least one element selected from a
group consisting essentially of a digital camera and an audio recorder,
wherein receiving the content occurs in real time relative to capturing the content,
10 wherein the content comprises at least one element selected from a group consisting
essentially of video footage, a digital image, and audio data, and
wherein a rating value is determined for the content based on the vote.

27. (new) The method according to Claim 16, further comprising the steps of:
updating the profile information associated with the content to reflect the rating value;
checking for a number of viewers submitting the vote;
comparing the number of viewers with a predetermined minimum number of votes,
5 wherein the content is not displayed if the number of viewers does not meet the predetermined
minimum number of votes; and
storing the profile information.

28. (new) The system according to Claim 21, further comprising:
a rendering module for formatting the content to be displayed to the viewer; and
a rendering module for selectively formatting the content for display to the viewer based
on the rating value associated with the content,
5 wherein the content comprises at least one element selected from a group consisting
essentially of video footage, a digital image, and audio data.
